

Autologous

A Guide to Protecting Your Health After Transplant:

Recommended Tests
and Procedures

Introduction

Congratulations!

You have completed your transplant. Now, your recovery begins. It can take time, but there are many things you can do to improve your health. There are also things you can do to prevent or treat problems that might show up later.

This guide will help you and your doctors know which tests and evaluations are needed to help detect problems that may occur after your transplant. It also includes medications that you may need to take to help prevent or treat problems.

This guide is based on published recommendations written by physicians in leading transplant organizations. Your transplant doctor may make other recommendations like having some tests done more often, or eliminating tests you don't need. Your transplant doctor knows you best, so follow his or her recommendations carefully.

moving forward

In this guide you will find:

- Information about side effects that may occur months or years after transplant
- Charts with recommended tests and procedures for your six-month, twelve-month and yearly post-transplant check-ups
- Space for recording important information about your post-transplant care
- Information for your physicians about the tests and procedures you will need after your transplant (in the back pocket)

Give all of your doctors a copy of the chart in the back pocket and ask them to put it in your medical records. Each time you visit your doctor, remind him or her about the chart. Your reminder will help make sure that tests are done at the proper times. You and your doctor can get more information about these guidelines at www.cibmtr.org/posttransplant or by contacting your transplant center.

The recommendations contained in this guide were developed by:

- The Center for International Blood and Marrow Transplant Research
- The European Group for Blood and Marrow Transplantation
- The American Society for Blood and Marrow Transplantation

The doctors who belong to these organizations are recognized experts on bone marrow, blood stem cell and cord blood transplant.

Questions you may have

Why do I need all these tests and procedures?

Side effects from your transplant can occur many months or even years after transplant. Some can be mild, others can be more serious. The tests and procedures recommended in this guide help detect problems early so that they can be promptly treated. If needed, your doctor may also recommend more frequent appointments or additional follow-up tests.

Do I still need these tests even if I feel healthy?

Yes! Even if you feel fine, you may have problems that do not have any symptoms yet. It is often easier to treat problems when they are detected early, before you notice symptoms.

How many years after transplant are these tests and procedures necessary?

You will need to be checked for possible side effects of transplant for the rest of your life. Most of the tests described in this guide are not difficult or time-consuming. Some only require a physical examination or a simple blood test. Keep in mind that these tests are for problems that **may** occur after transplant. It's possible you will never experience any of these problems, or experience only a few.

What if my doctor needs more information?

If you or your doctor have questions about your post-transplant care, contact your transplant center. You can also get more information about these guidelines online at www.cibmtr.org/posttransplant.

Early detection and treatment improves recovery

Every person's transplant experience is unique. Some survivors have few problems, while others experience more severe complications. Treatment and recovery depend on diagnosis, age and other health factors. The complications listed below are those that may develop several months or years after transplant. You and your doctor can take steps to prevent or treat complications if they develop.

Liver—Chemotherapy, radiation therapy, viral infections and some medications can cause liver problems. Rarely, patients who receive many blood transfusions accumulate iron in their liver.

Lungs—Radiation and some chemotherapy drugs can cause breathing problems.

Bones—Steroids and other medications may cause bones to become weaker.

Kidneys—Radiation and chemotherapy drugs such as cyclophosphamide or those that contain platinum can cause kidney or bladder problems. Infections caused by adenovirus or cytomegalovirus (CMV) can also cause kidney or bladder problems.

understanding

Nervous System—Radiation to the brain or chemotherapy can cause nervous system problems including poor memory, short attention span or trouble remembering words. Children may have learning disabilities or delays in growth. Some chemotherapy can cause loss of sensation in fingers or toes.

Growth and Fertility—Chemotherapy and radiation therapy may alter normal hormone levels in all patients and may affect growth and sexual development in children. Most adults who have received radiation or chemotherapy are unable to conceive children. Prolonged use of corticosteroids may also affect normal hormone levels.

Heart and Blood Vessel—Although rare, chemotherapy and radiation therapy can cause damage to blood vessels or increase the risk of blood clots.

Infection—Changes to the immune system after transplant can lead to increased infections. Some of these infections can be severe or life-threatening.

New Cancers—Sometimes radiation and chemotherapy can cause cancers later in life.

Emotional Health/Quality of Life—Some survivors become depressed, anxious or tired after transplant. Medications may also contribute to some of these feelings. This can affect work, school, behavior or sexual relationships.

Mouth—Radiation therapy can cause dry mouth, tooth decay and other dental problems.

Eyes—Steroids, radiation, chemotherapy and other drugs may increase development of cataracts.

Important information to share with your doctor:

Usually, your transplant center will send a copy of your medical records to the local doctor who will care for you after your transplant. If your doctor has not received a copy of your records, ask him or her to contact your transplant center and include the records in your health file. It is also a good idea to record the following information for your records in case you need it in the future.

Where were you transplanted? _____

What year were you transplanted? _____

What is the phone number of your transplant center? (_____) _____

Who was the transplant doctor most involved with your care? _____

What was your diagnosis? _____

What conditioning (preparative) regimen did you receive with your transplant?

- Chemotherapy Radiation Both Unsure

What complications, if any, have you experienced post-transplant?

Autologous Transplant

An autologous transplant returns a patient's own bone marrow or stem cells to the body after high-dose chemotherapy and/or radiation therapy.

The charts on the following pages list steps to take that will help keep you healthy after your transplant. Your doctor may also perform different tests to check the status of your disease. Unless your transplant doctor gives you different instructions, you should follow these guidelines.

Use the charts on the following pages to keep track of tests and treatments that are completed at six months, one year and yearly after receiving your transplant. On the notes pages after each chart, record doctor's recommendations, medications, follow-up appointments or other important information.

information

Six-Month Check-Up

Done (✓)	Recommended Tests and Procedures
Liver	
	Liver function tests
Lungs	
	Lungs evaluated
	Discussion about not smoking
Kidneys	
	Test blood pressure
	Test urine protein levels
	Test of kidney filtration (BUN/creatinine)
Growth and Fertility	
	Blood test to check sex hormone level in children who have not yet reached puberty
Infection	
	Medication to prevent <i>Pneumocystis carinii</i> pneumonia (PCP)
Emotional Health/Quality of Life	
	Discuss emotional health and quality of life
	Discuss sexual health
	Discuss counseling and support groups
Mouth	
	Regular dental check-up
Eyes	
	Screening for visual symptoms (pain, dryness) or vision loss (by internist or oncologist)

Record important notes on the following page.

Use this space to record notes about your check-up and doctor recommendations.

Six-Month Notes:

Lined area for notes.

One-Year Check-Up

Year 1 Done (✓)	Recommended Tests and Procedures
Liver	
	Liver function tests
Lungs	
	Routine lung exam
	Discussion about not smoking
Bones	
	Bone density test for women
Kidneys	
	Test blood pressure
	Test urine protein levels
	Test of kidney filtration (BUN/creatinine)
Nervous System	
	Routine nervous system exam
Growth and Fertility	
	Blood test to check thyroid function
	Evaluate growth rate for children
	Blood test to check sex hormone levels
	— in women of any age
	— in children, both male and female, who have not yet reached puberty
Heart and Blood Vessels	
	Routine heart and blood vessel evaluation

One-Year Check-Up (Continued)

Year 1 Done (✓)	Recommended Tests and Procedures
Infection	
	Regular flu vaccine and re-immunization for diseases like pneumonia, hepatitis, tetanus and other diseases as recommended by the Centers for Disease Control (CDC) or EBMT
New Cancers	
	Discuss ways to reduce risk of cancer later in life
	Learn how to perform breast self-exam
	Learn how to perform testes self-exam
	Learn how to perform skin self-exam
	Screen for cancers that may be caused by drugs or radiation used during transplant
	Pap smear for women
	Mammogram for women over age 40—some experts recommend mammograms for women under age 40 who have had radiation therapy
Emotional Health/Quality of Life	
	Discuss emotional health and quality of life
	Discuss sexual health
	Discuss counseling and support groups
Mouth	
	Regular dental check-up
Eyes	
	Screening for visual symptoms (pain, dryness) or vision loss (by internist or oncologist)

one-year

Yearly Check-Ups for Life

Year 2	Year 3	Year 4	Recommended Tests and Procedures
Done (✓)			
Liver			
			Liver function tests—if previous results were abnormal
Lungs			
			Routine lung exam
			Discussion about not smoking
Kidneys			
			Test blood pressure
			Test urine protein levels—if previous results were abnormal
			Test of kidney filtration (BUN/creatinine)
Nervous System			
			Test function of nervous system—if previous results were abnormal
Growth and Fertility			
			Blood test to check thyroid function—if previous results were abnormal
			Evaluate growth rate for children
			Blood test to check sex hormone levels
			— in women of any age
			— in children, both male and female, who have not yet reached puberty
Heart and Blood Vessels			
			Routine heart and blood vessel evaluation

yearly

Yearly Check-Ups for Life (Continued)

Year 2	Year 3	Year 4	Recommended Tests and Procedures
Done (✓)			
Infection			
			Regular flu vaccine and re-immunization for diseases like pneumonia, hepatitis, tetanus and other diseases as recommended by the Centers for Disease Control (CDC) or EBMT
New Cancers			
			Discuss ways to reduce risk of cancer later in life
			Reminder to perform breast self-exam
			Reminder to perform testes self-exam
			Reminder to perform skin self-exam
			Screen for cancers that may be caused by drugs or radiation used during transplant
			Pap smear for women
			Mammogram for women over age 40—some experts recommend mammograms for women under age 40 who have had radiation therapy
Emotional Health/Quality of Life			
			Discuss emotional health and quality of life
			Discuss sexual health
			Discuss counseling and support groups

Use this space to record notes about your check-up and doctor recommendations.

Year 2 Notes:

A large, light green rectangular area with horizontal lines, intended for writing notes. The lines are evenly spaced and extend across the width of the area. The area is positioned below the 'Year 2 Notes:' label and occupies most of the page's vertical space.

Use this space to record notes about your check-up and doctor recommendations.

Year 3 Notes:

A large, light green rectangular area with horizontal lines, intended for taking notes. The lines are evenly spaced and run horizontally across the entire width of the area. The background is a solid light green color.

Use this space to record notes about your check-up and doctor recommendations.

Year 4 Notes:

Maintain a healthy lifestyle

While living a healthy life is important for everyone, following these guidelines is especially important for transplant survivors.

Transplant survivors should:

- Avoid smoking or chewing tobacco
- Eat a healthy diet
- Be physically active 20–30 minutes most days of the week
- Maintain a healthy body weight
- Avoid alcohol or use alcohol only in moderation, usually less than 2 drinks per day
- Wear sunscreen and avoid excessive exposure to the sun
- Wear helmets, seatbelts and other safety equipment when riding a bike or motorcycle, riding in a car, or playing sports
- Avoid use of illegal drugs
- Discuss **all** medications with your doctor, including herbal or alternative medications you may be taking and medications or supplements you can get without a prescription. Any of these may cause problems for some transplant survivors.

In addition, survivors and their family members should be asked about depression and offered help when needed.

If you need help finding a mental health expert, contact your transplant center, a local cancer center, or the American Psychological Oncology Society at (866) 276-7443 or www.apos-society.org

Routine check-ups

While it is important to watch for complications that might happen as a result of your transplant, you also need to follow the same health guidelines that apply to the general public. Be sure to schedule routine check-ups with your primary physician to monitor for:

- High blood pressure
- High cholesterol
- Diabetes
- Colon cancer
- Prostate cancer (for men)
- Breast and cervical cancer (for women)
- Sexually transmitted diseases
- Osteoporosis (for women)

Details about recommended health guidelines for the general public can be found at: www.ahrq.gov/consumer

Center for International Blood & Marrow Transplant Research®

About the CIBMTR

The Center for International Blood and Marrow Transplant Research (CIBMTR) combines the expertise and unique resources of two leaders in the field of blood and marrow transplant: the National Marrow Donor Program and the Medical College of Wisconsin's International Bone Marrow Transplant Registry and Autologous Blood and Marrow Transplant Registry.

These organizations conduct and support clinical studies that involve large numbers of patients from multiple transplant centers. These studies will help improve outcomes for blood and marrow transplantation. The goal is to help more transplant patients live longer, healthier lives.

This patient guide was developed by the Consumer Advocacy Committee of the CIBMTR. The Consumer Advocacy Committee provides a consumer perspective on the research agenda of the CIBMTR, and brings important publications of the CIBMTR to patients and the public.

Thanks to the National Marrow Donor Program for their assistance in producing this booklet.

Physicians' Guidelines

Protecting your patient's health after transplant

Recommended screening and preventive practices

The guidelines, *Recommended Screening and Preventive Practices*, were developed by a consensus panel formed by members of the Center for International Blood and Marrow Transplant Research (CIBMTR), the European Group for Blood and Marrow Transplantation (EBMT), and the American Society for Blood and Marrow Transplantation (ASBMT).¹

Complications from hematopoietic cell transplantation can develop long after a patient leaves the transplant center and returns to his or her primary care physician. To prevent late complications from increasing morbidity in these post-transplant patients, physicians need to be aware of the specialized care these patients require.

Recognizing complications early, while therapeutic options are more numerous and treatments more effective, is critical to the well-being of transplant recipients.

Physicians can use the chart on the back to:

- Become aware of the specialized care required by transplant recipients
- Track treatments administered and tests completed
- Trigger discussions with patients on proper self-care

Patients have received a similar chart to help guide them in requesting appropriate care from their primary care physicians.

To access the full publication visit www.cibmtr.org/posttransplant

Recommended screening and preventive practices for post-transplant patients

Physicians: See back for important information

Key:

- 1 = Recommended for all transplant patients
- 2 = Recommended for allogeneic patients only
- 3 = Recommended for any patient with ongoing chronic GVHD or immunosuppression
- + = Reassessment recommended for abnormal testing in a previous time period or for new signs/symptoms

Six Months	One Year	Annually	Recommended Screening/Prevention
Liver			
1	1	+	Liver function testing
	1	+	Serum ferritin testing
Respiratory			
1	1	1	Clinical pulmonary assessment
1	1	1	Smoking tobacco avoidance
	2	+	Pulmonary function testing
+	+	+	Chest radiography
Musculoskeletal			
	1	+	Bone density testing (women and patients with prolonged corticosteroid or calcineurin inhibitor use)
3	3	3	Screen for corticosteroid-induced muscle weakness
3	3	3	Consider need for physical therapy consultation
3	3	3	Osteopenia prophylaxis with bisphosphonates is recommended by some experts
Kidney			
1	1	1	Blood pressure screening
1	1	+	Urine protein screening
1	1	1	BUN/creatinine testing
Nervous System			
	1	+	Neurological clinical evaluation
Endocrine			
	1	+	Thyroid function testing
	1	1	Growth velocity in children
1	1	1	Gonadal function assessment (prepubertal boys and girls)
	1	1	Gonadal function assessment (postpubertal women)
Vascular			
	1	1	Cardiovascular risk factor assessment
Immune System			
3	3	3	Encapsulated organism prophylaxis
1	3	3	PCP prophylaxis
3	3		CMV testing
	1	1	Immunizations
3	3	3	Antifungal prophylaxis is recommended by some experts
3	3	3	Prophylaxis for HSV is recommended by some experts
	2	2	Endocarditis prophylaxis with dental procedures following AHA guidelines
Second Cancers			
	1	1	Second cancer vigilance counseling
	1	1	Breast/skin/testes self-exam
	1	1	Clinical screening for second cancers
	1	1	Pap smear/mammogram (over age 40)
Psychosocial			
1	1	1	Psychosocial/QOL clinical assessment
+	+	+	Mental health counseling for patients with recognized psychosocial problems
1	1	1	Sexual function assessment
1	1	1	Maintain robust support networks
Oral Complications			
1	1	1	Dental assessment
Ocular			
1	1	1	Ocular clinical symptom evaluation
	3	3	Schirmer testing
	1	+	Ocular fundus exam
