

COVID-19 Updates

Effective Immediately

The Respiratory Virus Post-Infusion Form (2149) was released into FormsNet3 on May 8, 2020.

- Prior to the release, the ability to submit a fillable PDF version of form 2149 via Service Now, was available when a recipient was either diagnosed with or died from COVID-19 (SARS-CoV-2). **This is no longer available** as a fillable PDF form and should be submitted via FormsNet3.
 - Any 2149 form submitted to Service Now prior to the May 8th release will be manually entered into FormsNet3 by May 15th. Centers will be contacted if there are any outstanding issues.
- The form will automatically be generated in FormsNet3 when:
 - COVID-19 (SARS-CoV-2) is captured as an infection on the Post-HCT Form (2100), Post-TED (2450), or Post-CT (4100)
 - COVID-19 (SARS-CoV-2) is captured as a primary or contributing cause of death on either the Post-TED Form (2450) or Death Data Form (2900).
- We are encouraging centers to generate this form **on-demand** as soon as it is known when a recipient has been diagnosed with or died from COVID-19 (SARS-CoV-2). The “Initial” form should be submitted within 14 days after diagnosis.
 - There is no need to complete a post-infusion form (2100, 2450, or 4100) prior to its DUE date to generate the 2149.
- The 2149 has two timepoints, “Initial” and “Follow-up”.
- If the infection is captured as “improved” or “ongoing” in question 41 on “Initial” submission, an additional “Follow-up” 2149 will be made due to capture infection resolution. This form should be submitted, when the infection resolved, or death occurred.

Additionally, the following forms were modified to include additional questions to capture COVID-19 (SARS-CoV-2) and released in FormsNet3 on May 8th. If forms were complete prior to the release, and updates are made to them, then the new COVID-19 (SARS-CoV-2) questions will be required to answer.

- The Pre-TED Form (2400) has been modified to add three additional questions to capture COVID-19 (SARS-CoV-2) infection prior to the start of the preparative regimen / infusion; F2400 R7 (questions 88- 90).
- The Cellular Therapy Essential Data Pre-Infusion Form (4000) has also been modified to add three additional questions to capture COVID-19 (SARS-CoV-2) infection at any time prior to the start of the preparative regimen / infusion; F4000 R6 (questions 111- 113)
- The Post-TED Form (2450) has been updated to add:
 - Option for COVID-19 (SARS-CoV-2) as both a primary and contributing cause of death; F2450 R5 (questions 3 and 5).
 - Question to capture if the recipient developed COVID-19 (SARS-CoV-2) since the date of last report; F2450 R5 (question 50).
- The Death Data Form (2900) has been modified to capture COVID-19 (SARS-CoV-2) as both a primary and contributing cause of death; F2900 R4 (questions 4 and 6).
 - If a death was reported for COVID -19, centers may now update the reason of death to list COVID-19 (SARS-CoV-2).

The blank forms are available on the [Data Collection Forms Page](#) of the CIBMTR website.

If you have any questions or concerns, please contact CIBMTR Center Support
(<https://nmdp.service-now.com/csm>).

Sincerely,
Data Operations
