

Coming Soon to CIBMTR: Security with Okta

At CIBMTR, security is a priority and we are always striving to stay ahead of the curve, especially when it comes to information security and data protection. With our commitments to security and usability we are excited to introduce **Okta multi-factor Authentication** to our Portal Applications. Okta is a Multi-factor authentication (MFA), that will provide a second layer of security utilizing a mobile device and security code after inputting your username and password. Okta integration on our Portal will make your login experience easy and even more secure.

Following this update, the current google credentials will no longer be valid for Portal access. Instead, Portal will use the same Okta authentication currently used for FormsNet3(FN). For those users who already regularly access FN, this move to Okta will simplify your relationship with CIBMTR as you will now use the same username and password for the portal that you currently use for FN.

Currently we are in the process of configuring Okta as well as giving Portal a refreshed look & feel. When it is live, you will receive another email with detailed instructions on how to log in using your existing account; or activate a new account for first time users.

If you have any questions regarding the changes, please contact CIBMTR Center Support at <http://nmdp.service-now.com/csm> or email us at cibmtr-portalhelp@mcw.edu
