

Ability to View All Forms for a Crid When Multiple Centers Are Reporting Data on a Recipient

FormsNet3SM view-mode functionality change

On May 8, 2020 a change to the view-mode functionality of a form was released. Centers are now able to view forms completed by another center, when multiple centers are reporting data for the same recipient in FormsNet3SM. This new functionality is important, for example, when a recipient transfers centers; now both centers are able to view all forms submitted in the Recipient Forms grid. This change is only applicable for the view-mode; no changes were made to the edit-mode. A center is only able to edit data on forms completed by their center.
