

CIBMTR Center Status Definition Change

Recently, to better reflect the activities of our centers, the CIBMTR has redefined the criteria to be considered an *active* or *follow up* CIBMTR center.

The following center status definitions were updated:

- **Active**
 - A center has been registering new patients and submitting forms during the most recent 24-month period.
- **Follow Up**
 - A center has been submitting forms during the most recent 24-month period but has **not** registered any **new** patients.
 - Follow-up centers will now be held to the same CPI requirements as active centers.

Individual centers will be notified if their status has changed and given information about how to become active centers again if they wish to do so.
