

Forms to be Revised

Hello,

Over the next month, CIBMTR will begin revising the next set of data collection forms, and we would like to ask for your help.

The Forms to Be Revised Include:

Forms
2030 – Sickle Cell Anemia Pre-HCT Data
2130 – Sickle Cell Anemia Post-HCT Data
2402 – Disease Classification (“Inherited abnormalities of erythrocyte differentiation or function” Section ONLY

The goal of the revision process is to ensure the forms capture all currently relevant data, particularly where new definitions or tests have been accepted for use in the field. When reviewing the forms, we also keep in mind the length of the form and burden to data professionals. There are two ways in which you can contribute:

1. Submit suggestions for form changes

- To do this, please review the [forms](#), and send any suggested improvements to cibmtr-form-feedback@NMDP.ORG. This can include clarification around questions, adding new data points, or reformatting the way data are captured. All suggestions will be reviewed.

2. Volunteer for a Form Revision Committee

- Representation from data managers is a valuable part of the revision process. Participation on the committee includes reviewing the forms via conference calls and determining the content changes needed. We expect the discussion will require about three meetings to complete, but will adjust as needed.

Please submit suggestions or questions to Dani Vitali and Stephanie Meyers at cibmtr-form-feedback@NMDP.ORG, or volunteer for a committee by January 3rd, 2020.

Best Regards,
Data Operations
