

NEW eLearning for Research Sample Submission

CIBMTR Training announces the release of a new eLearning to instruct center staff who handle the collection and shipment of donor and recipient blood samples to the CIBMTR Research Repository. We are calling your attention to the correct method to report research sample identification numbers to the CIBMTR that is critical for matching donor and recipient samples to the clinical data reported in FormsNet.

The content includes the submission process, accurate labeling, form reporting, and shipping information.

Module length: approximately 10 minutes
