

New FormsNet3 Feature

We are pleased to announce a new 'Attachment' feature in FormsNet3. This new feature will allow users to attach electronic documents directly to a form.

While attaching associated documents (lab reports, progress notes, etc.) is not required, supporting documents can help to reduce requests at a later date from your CRC, and can reduce queries when lab values are significantly out of range, etc. Direct attachment to the form you are in eliminates the need to fax/scan documents separately with a 2800 form.

Training information on how to use the attachment feature has been added to the [FormsNet3 Training Guide](#), located on our website. You will find the Recipient forms instruction on pages 24, 25, and 26.

Sincerely,
CIBMTR Data Operations
