Recently updated eLearnings

The following training modules are now available on the CIBMTR website:

Updated

[Query Functionality](#): CIBMTR staff have the ability to place a query directly on certain questions in FormsNet3 which allows the data manager to see immediately where queries need to be resolved. This training will demonstrate through video how to respond to an active query, ultimately saving time in the resolution of data quality issues.

[Research Sample Submission](#): The purpose of this training is to inform transplant centers data management, laboratory staff, or anyone who handles blood sample collection how to accurately submit recipient and/or related donor hematopoietic stem cell transplant samples with its accompanying forms to the Research Sample Repository and CIBMTR.
