

Specific Instructions for Reporting of Flow Cytometry for Multiple Myeloma and Lymphoma has been REMOVED from the Forms Instructional Manual

Centers can now report **negative** Flow Cytometry Assessments for Multiple Myeloma and Lymphoma. Flow cytometry has improved over the years leading to increased sensitivity for reporting negative disease status.

If a flow assessment was performed, **report** the assessment as:

- **"yes"** if flow cytometry was performed in the reporting period
- **"no"** if flow cytometry was not performed in the reporting period
- **"not applicable"** if flow was never performed since diagnosis
