RE: Change to the Specimen Repository Consent Question on Pre-TED (Form 2400)

Effective immediately, centers should report the consent status for both allogeneic related (if your center is participating) and unrelated repository specimens on the Pre-TED. This change is necessary to capture the consent status for those unrelated HCT recipients that donated repository specimens that remain on the TED track.

If you have any questions, please contact Marie Matlack (mmatlack@nmdp.org) or Janet Brunner (jbrunner@mcw.edu).
