Subject: One-time Consolidation of Past Due Form 2300s

In an effort to help centers get caught up with long-term follow-up we will be implementing a consolidation all 2300s and 2450s that are currently past due to make only the most recent 2300 due. Specifically:

For any recipient who has more than one 2300 (greater than 2 years post-transplant) or 2450 (Post-TED) starting at year three post-transplant currently due (i.e. follow-up obligations spanning 2 or more years), only the most recent 2300 or 2450 form due will remain on the Forms Due Report. All events that occurred between the last completed follow-up and the most recent one due will be reported in aggregate on one 2300 or 2450. The only exception are the 2300s associated with a recipient enrolled on the KGF study. In these cases, all the 2300s will remain due.

These changes will begin appearing on your Forms Due Report over the next couple of weeks. The only exception is the 2300s due for recipients enrolled on the KGF study; in this case all 2300s will remain on the Forms Due Report and must be completed. We will send another announcement when the changes have all been made in the FormsNet Forms Due Report. In the meantime, when completing 2300s and 2450s, only complete the last one due if more than one 2300 or 2450 is listed on the Forms Due Report. Please remember that it is essential to report all events that occurred after the last 2300/2450 was submitted on the most recent 2300/2450 that will be submitted. If you have any questions about which forms to complete or how to report events, please contact your center’s liaison.

We want to thank centers for their continued support of the CIBMTR observational database. The CIBMTR research program could not be accomplished without your dedicated contributions.
