

18. On-Site Data Audits [table of contents](#)

On-site data audits of the TED forms and the Comprehensive Report Forms are performed at transplant centers as part of the CIBMTR's data quality assurance program. Transplant centers will be audited once every four years. To be eligible for an on-site audit a transplant center must have completed a minimum of 20 HSCTs. This can be any combination of allogeneic related and unrelated, and autologous HSCT. New transplant centers are eligible for audit the year following the accrual of the center's 20th recipient. For more information regarding the on-site data audit program, see [appendix H](#).
