

4. Autologous Hematopoietic Stem Cell Transplant [table of contents](#)

Although data regarding recipients receiving autologous HSCT are not required to be submitted as part of the C.W. Bill Young Transplant Program, the CIBMTR is highly committed to collecting data on these recipients for research studies. Transplant centers are encouraged to submit data on these recipients.

If the transplant center participates in the CIBMTR as *TED only*, the center will submit the following forms: the Unique ID Assignment (CRID) (Form 2804), the Pre-TED (Form 2400), and the Post-TED Form (Form 2450). Form 2804 is due only for a recipient's first HSCT of any type submitted to the CIBMTR.

If the transplant center participates in the CIBMTR as a *Comprehensive Report Form* center, the center will submit: the Unique ID Assignment (CRID) (Form 2804) and the Pre-TED (Form 2400). The Form 2804 is due only for a recipient's first HSCT. If the recipient consents to participate in research, HSCT follow-up data will be submitted on either the Post-TED Form, or the Comprehensive Report Forms as determined by the algorithm. If the recipient does not consent to participate in research, then the algorithm will not be used and the Form 2804 will be the only form due.

For more information regarding research consent see [section 6](#).
