

## CIBMTR 2017 CORPORATE CENTER VOLUMES DATASET

US transplant centers have been required to report allogeneic transplants with the CIBMTR since late 2007; reporting of autologous transplants is voluntary. It is estimated that the CIBMTR captured 80% of all autologous transplants performed in the US since 2008.

The US Center Volumes Dataset available to corporations contains center-specific pre-transplant patient-, disease-, and transplant-related characteristics data for nearly all allogeneic and a majority of autologous hematopoietic stem cell transplants (HCTs) performed in the US between 2012 and 2016. Variables in the dataset includes: center name; center location (US state), year of transplant, patient race, patient ethnicity, patient sex, and patient age (in decades) at transplant, disease, disease status at transplant (when applicable), type of donor and graft source.

- In order to protect patient anonymity, patients who received their transplants at centers that registered fewer than 20 transplants with the CIBMTR in a given year, the following data were redacted: race, ethnicity, sex, and age at transplant. Data were redacted only for those years where fewer than 20 transplants were performed. This impacted 2,010 (2%) of 101,210 transplants and 65 (31%) of 210 centers included in the current center volumes dataset.
- Twenty nine patients from 21 centers are not present in the US Center Volumes Dataset and represent approximately <1% of the center transplant population. For these patients, the center did not provide complete data or it was not validated in time for this report. These centers are listed in Table 1.

Table 1. US centers whose HCT recipient data are not included for certain patients in the 2017 Center Volumes Dataset		
Center Name	State	HCT Type(s) Performed
Children's Hospital Of Wisconsin	WI	Allogeneic and Autologous
Cincinnati Children's Hospital Medical Center	OH	Allogeneic and Autologous
Dana Farber Cancer Institute - Adults	MA	Allogeneic
Fred Hutchinson Cancer Research Center	WA	Allogeneic
Hackensack University Medical Center	NJ	Allogeneic
Hca Health Services Of Oklahoma, Inc.	OK	Allogeneic
Johns Hopkins All Children's Hospital	FL	Autologous
Karmanos Cancer Institute	MI	Autologous
M.D. Anderson Cancer Center	TX	Autologous
Mayo Clinic Arizona And Phoenix Children's Hospital	AZ	Autologous
Memorial Sloan Kettering Cancer Center - Adults	NY	Allogeneic
Northwestern Medicine	IL	Allogeneic

Center Name	State	HCT Type(s) Performed
Penn State Hershey Medical Center	PA	Autologous
Rush University Medical Center	IL	Autologous
St. Jude Children's Research Hospital	TN	Allogeneic
The Blood And Marrow Transplant Program At Northside	GA	Autologous
University Of California San Francisco Medical Center	CA	Allogeneic and Autologous
University Of Minnesota Blood And Marrow Transplant - Peds	MN	Allogeneic
Utah Blood And Marrow Transplant Program - Adults	UT	Allogeneic
West Virginia University Hospitals, Inc.	WV	Allogeneic
Westchester Medical Center	NY	Allogeneic and Autologous
